About Calligra

The integrated work applications suite

Words
is an intuitive word processor application with desktop publishing features. With it, you can create informative and attractive documents with ease.

Tables
is a fully-featured spreadsheet application. Use it to quickly create spreadsheets with formulas and charts, to calculate and organize your data.

Stage
is a powerful and easy to use presentation application.
You can dazzle your audience with stunning slides containing images, videos, animation and more.

Kexi
for integrated data management

Flow
for diagramming and flowcharting
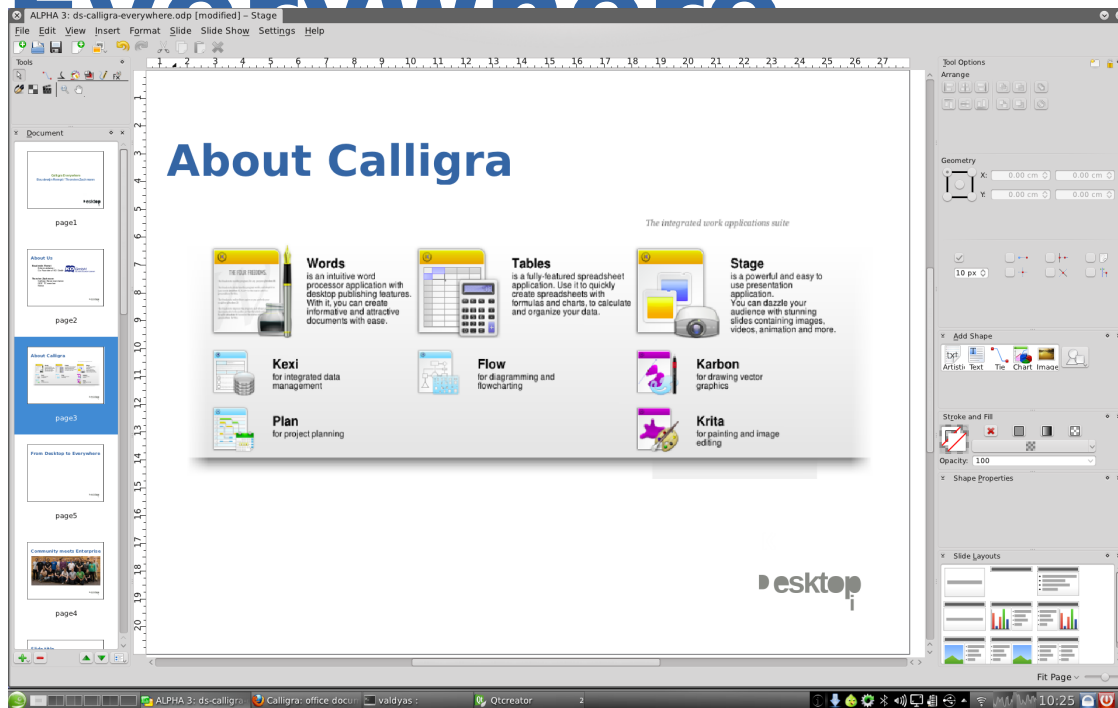

Karbon
for drawing vector graphics

Plan
for project planning

Krita
for painting and image editing

Getting involved

The ODF source code is hosted at Gitorious. You...
development version of the source code with GIT.

Examples

There are two example programs for ODFKit. The source is part of the od...
repository (although it builds separately), or you can download a binary for
Windows (You might need the MSVC runtime).

Example 1: Pics2Slides

WebODF

WebODF: work with your office files in the cloud, on the desktop and on your mobile

About Developers Community

WebODF is a JavaScript library that makes it easy to add Open Document Format (ODF) support to your website and to your mobile or desktop application. It uses HTML and CSS to display ODF documents.

WebODF is a Free Software project. All code is available under the AGPL. This means that you can use the code free of charge, investigate how it works, and share it with others.
